Allowable Subject Matter

The following is an examiner's statement of reasons for allowance: After further consideration and in view of the remarks put forth by Appellant in their 10/18/04 Brief and of record, the Office agrees the method claims 31-39 define over the art of record because the art fails to teach forming each of a plurality of different selected reagent mixtures in the combined reagent-mixture stream by adjusting the flow rates of at least one of each of a plurality of reagent-mixtures components in accordance with a respective flow-rate ratio of reagent-mixtures components forming each selected reagent mixture. Further, the Examiner's amendments made in the 1/11/05 non-final Office action specifies the apparatus must thoroughly and uniformly mix the different reagent and sample mixtures in the stream. EP 107333 teaches the sample and reagents that do not intermix during flow because of sheath flow. See page 7 lines 9+ of EP 107333 that specifically teaches the sheath flow streams are "substantially unmixed streams". Yamamoto et al. ('888) and Carver et al. ('491) teach blood analyzers that creates the same or fixed dilution ratios for each sample and do not meet the claimed forming each of a plurality of different selected reagent mixtures in the combined reagent-mixture stream by adjusting the flow rates of at least one of each of a plurality of reagent-mixtures components in accordance with a respective flow-rate ratio of reagent-mixtures components forming each selected reagent mixture.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
